

Senior/Principal Software Engineer – Development

Enea Openwave develops the next generation of Mobile Internet Technology, enabling Telecom Operators to provide a first-class user experience to mobile subscribers on data networks.

We are currently seeking an enthusiastic and motivated Senior/Principal Software Engineer to join our team in Pune.

Location: Pune, India

Essential Criteria

- Over 12 years relevant experience
- Experience in the design and development of complex enterprise software
- Good understanding of architecture and challenges of highly available, distributed, scalable server-side software and databases
- All-round view of software development: requirements, architecture, design, unit test automation, source code control and release aspects, Agile processes, etc
- Hands-on development skills in C / C++, troubleshooting and debugging on Linux / Unix platforms
- Good understanding of OS / networking concepts, socket-level programming
- Hands-on experience working with relational and / or NoSQL databases
- Ability to mentor and guide other team members to achieve common goals
- Java skills will be an added advantage
- Customer-facing skills such as solution architecture, software deployment and testing, in customer lab / pre-production / production environments would be an added advantage

Please forward an up-to-date CV, detailing how you meet the essential criteria for this role to Vani.Dwivedi@enea.com

Enea is an Equal Opportunities Employer
